### DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 8 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Walbrun (U.S. 4,307,141).

See Figure 3 and the abstract.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 4-7, 10-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Walbrun (U.S. 4,307,141) in view of Trokhan (U.S. 4,469,735).

Walbrun teaches a two ply embossed tissue where there are perforations which force fibers inwards towards other plies (abstract and Figure 3). Walbrun fails to teach more than two plies and the plies having different degrees of stretch. Trokhan teaches a three layer embossed tissue where the layers have different degrees of stretch to

increase the bulk of the laminate by differential stretching during embossing. The instant invention claims three plies and the plies having different degrees of stretch. It would have been obvious to one of ordinary skill in the art use three layers of different degrees of stretch in the tissue of Walbrun in order to provide better bulk to the embossed tissue because of the teachings of Trokhan. Variation in size and distribution of the perforations, as well as the differential stretch of the layers, depending on the desired degree of bulk and absorption, is taken as being within the ordinary skill of the art absent unexpected results.

5. Claims 2 and 5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Use of "preferably" in these claims is indefinite as it is a type of range within a range and it is not clear which range is being claimed.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 571-272-1503. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Sample can be reached on 571-272-1376. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
